

Position Title: Engineering/Project Manager

**Summary Description:**

Leading manufacturer of mechanical jacks is seeking an experienced manager who has worked as a mechanical engineer, engineering manager and as a project manager. The successful candidate will coordinate projects both within and outside of the engineering department and will provide leadership to a team of engineers doing both product development and production work.

**Key Duties:**

1. Manage project based initiatives of the company in areas including engineering, operations, product development and others as needed
  - Projects may be self initiated or identified in collaboration with other managers in the company
  - Identify, track and report and identified goals of the projects
2. Manage design and test engineers to promote product development both of new products and technologies for the company to sell as well as enhancements to existing products
3. Manage production designers and detailers
  - Working with the design group leader, ensure orders flow through the department efficiently and rebalance priorities as required
  - Identify and enable best practice activities in daily activities of the department including GD&T, documentation and BOMs

**Key Role Interactions:**

- Report to the Executive Vice President
- Work with all managers to identify and execute projects and objectives of the company
- Work with manufacturing leadership to coordinate activities of engineering and operations

**Qualifications / Professional Skills:**

- Mechanical Engineering or related degree with 5+ years experience in a management role is required
- Demonstrated project management experience is a must
- Proficiency with one or more common software packages for tracking projects, CAD and 3D modeling a plus

**Interpersonal Skills:**

- Must be able to work with every level of the organization. Ability to communicate ideas clearly and provide feedback and motivation will be key
